

# HELIX

Home Energy Labeling Information eXchange

*Happier Clients. No Hassle for Agents.*

## Complete Valuation

Real estate agents must live up to a variety of expectations, from **accurately valuing a home** to **suggesting selling points**. Homebuyers are becoming increasingly interested in more knowledge, including information on the **energy use of a home**, **high-performance home ratings**, and other **green data** fields.

This information is not centrally located, which makes it harder and more time-intensive for agents to find and include in MLS listings.

Now there is a solution. It's called HELIX.

## What Is HELIX?

HELIX is a database capable of automatically populating real estate listings with home energy information.

## How Does It Work?

Real estate agents will be able to see data about **solar**, home energy labels like **Home Energy Score** and **ENERGY STAR**, and **annual energy usage** where available, giving them all the information needed to work with clients, appraisers, and lenders. This information, where available, will transfer right from HELIX to the MLS listing, making it simple to find with **no extra work for agents**.

HELIX helps real estate agents better **serve their clients**, better **represent their clients' interests**, and **close transactions more quickly**. Support HELIX and ensure accurate, comprehensive listings. **It really can be that easy.**

The HELIX project is supported by the U.S. Department of Energy, Vermont Public Service Department, Energize Connecticut, Massachusetts Department of Energy Resources, NHSaves, Rhode Island Office of Energy Resources, and several other local, state, and national partners.
